Subject: USEPA EMERGENCY NOTIFICATION - 1WTC, B5 LEVEL

CC: P. Leahy, A. Niedermeyer, R. Peduto

This buckslip documents the verbal emergency notification made to the USEPA on July 30, 1993. Mr. Dan Manasia received the phone call.

On the B-5 level of 1WTC, approximately 240 sq. ft. of asbestos containing fireproofing must be removed prior to the performance of a structural integrity inspection by facility engineers. The engineers must inspect columns which were damaged during the February 26, 1993 blast, but were not discovered as damaged until recently during inspections in adjacent areas. The abatement is scheduled to begin on 8/2/93 and end 8/18/93.

Mr. Manasia approved of the project as an emergency and requested that the emergency notice be sent to his attention with the words "EMERGENCY OPERATION" on the top of the notice.
